REPLICA Series

There are a handful of famous skate spots located around the globe that are regularly featured in skate magazines and videos. From the Sants Bench in Barcelona Spain to the Hubba Hideout in San Francisco, California; most skaters will never have the opportunity to travel to a faraway destination to skate any of these legendary spots. So we have developed our Replica Series equipment which duplicates these sites exactly down to the precise angles and dimensions. It is now possible to bring these coveted skate spots to your local skatepark. Though we have not changed the dimensions of the original spots, our engineers have improved the structural durability to withstand the abuse that skateboarding causes on equipment. Our Replica Series equipment can be incorporated into master plan designs or can easily be added to existing skatepark facilities to expand the skating experience.

Hubba Hideout

LOCATION: SAN FRANCISCO, CALIFORNIA

The Hubba Hideout is a staple in today's skatepark design. We have replicated the exact scale and dimensions of the original location (which is now off limits to skateboarders). The ledge and stair combination are cast with our 8000 PSI concrete and include protective steel edging.
